DETAILED ACTION

Allowable Subject Matter

1. Claims 1-24, 49, and 50 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Patent No. 6,405,134 to Smith et al. is the reference closest to the claimed invention. Smith et al. disclose a method for electric utility storm outage management, the method comprising: determining an interconnection model of an electric utility power circuit, the power circuit comprising power circuit components; determining information indicative of weather susceptibility of the power circuit components; determining a weather prediction; and determining a predicted maintenance parameter based on the interconnection model, the weather susceptibility information, and the weather prediction. However, Smith et al. do not teach the interconnection model including information about the layout of the power circuit and the interconnectivity of the power circuit components; providing a store of weather susceptibility information for the power circuit components for different weather conditions, wherein the weather susceptibility information for the power circuit component is different for different weather conditions; and determining a predicted maintenance parameter for the power circuit based on the interconnection model, the weather susceptibility information, and the weather prediction; and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
